

Joe Macrina, PE

Executive Vice President

Joe Macrina is Executive Vice President and Chief Operating Officer for CHA. With over 30 years of transportation engineering experience, he serves as a key member of the executive team. His strength lies in his ability to see the big picture and to think holistically about engineering solutions for a project, community and the region. Joe has been a trusted leader, principal and project manager and is ultimately responsible for monitoring CHA's services for public and private sector clients. He is still heavily involved in projects for key clients, including statewide on-call contracts, in which he is responsible for conceptual, planning, preliminary, final and right-of-way construction documents, design team assignments and driving projects to completion. He provides technical guidance for our engineers in producing conceptual layouts to final construction plans for a range of complex transportation projects.
